DETAILED ACTION

Drawings

1. Figure 10 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claim 15 is objected to because of the following informalities: In claim 15, line 4, "the first and second antennae" should be changed to --the first and second antennas--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, and 11-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Odachi et al (US Patent 6,346,916).

Odachi et al disclose, in figures 11 and 12A, an antenna device comprising a an insulating film 13, a first radio wave resonator 21 and a second resonator 22 formed on the insulating film, a first connection cable 25 coupled to the feed point of the first resonator, and a second connection cable 15 coupled to the second resonator.

4. Claim 14 is rejected under 35 U.S.C. 102(b) as being anticipated by Qi et al (US Patent 5,966,098).

Qi et al disclose, in figure 1A and 1B, an antenna system for an RF data communication device comprising a body 14 a cover 12 having a display 16, wherein the cover contains a connection cable coupled to a radio wave resonator (22,24).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Odachi et al.

The patent to Odachi et al, described above, differs from the claimed invention because it does not disclose the specific kind of dielectric material, however the PET and Pen material are well known in the art and therefore they represent an obvious expedient. The specific thickness of the insulating film is considered an obvious matter of design choice depending upon the desired characteristic of the antenna device.

Allowable Subject Matter

6. Claims 3-8 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2821

7. The patents to Masaki et al, Snowdon, Ayala et al, Tsunnekawa, and Klostermann are cited as of interest showing the antenna system similar to that disclosed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan Ho whose telephone number is (703)308-4080. The examiner can normally be reached on M-F.
